# DigitalWaves Digital Footprint Tracker

#### The Problem

The digital age can be difficult to navigate, especially when it comes to your digital footprint. Complicated methods and mean non-technical individuals have increased risks of personal information about them being available freely online, leading to dangerous outcomes such as identity theft, fraud and impersonation.

#### The Solution

DigitalWaves is a web app that can be ran locally. It allows the user to input and edit their information via a simple form and scan for matches.

The process is made simple, by automating requests to APIs from popular information sources and presenting this in a user-friendly fashion. The user can select relevant links and review these along with a score and helpful tips on how to reduce their digital footprint.

### Next Steps

- Incorporate LLMs into advice system
- Possibility to deploy on public-facing web server
- Option for users to add additional APIs
- Incorporate more data sources and Custom Search Engines

## Features

**Check Your Score** 

How Can I Fix?

Secure accounts system for multiple users
